For All:

Notification bell must be functional to all acounts kung anong update ang nagyayari kung may nag inquire ba, navalidate na ba, nareject ba, nireturn ba, o may nasubmit na biomass na need ipavalide sa LGU etc.
[Notification Bell must be fully functional to all the roles, if theres an update that happened like someone who inquired, validated, rejected, returned, or who submitted a Biomass thats need validation to the lgu, etc,.]

The website will automatically sign-out the user because of inactivity for a certain amount of time

Cooperative / Hub Coordinator Portal:

Yung sa Availability Classification ang choices nalang siguro don is Available to others and Not available for others (ano ba magandang term?) wag yung potential at theoretical na word.
[The choices in the “Availability Classification”, I think it should only be “Available to others“ and “Unavailable to others.” Not the potential and theoretical word.]

Yung sa availability start date and availability end date dapat di sya both required kasi may mga biomass na di available na ibenta
[The “Availability Start Date” and “Availability End Date” shouldn’t require both because there are biomass that are not available to sell.]

And kapag nagsubmit na ng biomass record dapat naka indicate don kung Available ba sya for other na mainquire or hindi dagdag nalang siguro ng option na ganun
[If you submit a biomass record, it should indicate if its “Available to others” for inquire or not, i guess you can add an option there.]

Yung sa aggregation na section yung hub/cooperative na list is dapat pwede sila naka add pa ng other pa ng coop or hub
[For the Aggregation section, the “Select hub” list in Hub/Cooperative, there should be a way to add other coop or hubs]

Yung sa biomass record yung sa 1. Source Information kapag nag new source ka dapat ang name is “Farm Name” instead of Source Name
[For the Biomass Records, the “Add New Biomass Record”, “1. Source Information” section, If you create a new source it should be the name “Farm Name” instead of “Source Name”]

After that sa source type dapat may rice mill doon and other na pwedeng pagkuhaan ng biomass sa butuan
[After that, the Source Type, there should be “Rice Mill” as one of the options and other types of biomass found in butuan, or in the thesis paper.]

Yung sa add new biomass record 1. Source information then sa Location na part is dapat nakalist na tanan na barangay so that they can choose their location (they can type their baragay and it appears instantly)
[In the “1. Source Information” section, Location part, it should have all the list of the barangays so that they can choose their location.]

Then yung sa 2. biomass availability details yung selection ng unit doon yung tamang standard na sukat sana ng mga biomass kung paano siya kinikilo (anong tamang term dun? Mga kg, tons etc)
[Still in the “Add New Biomass Record”, “2. Biomass Availability” section, the Unit Selection is that right standard weight for the biomasses like how they are weighted? Like kg, tons, and etc,,,.]

In manage inquiries the coop or huh coordinator must view the details what buyers submitted.
[In the “Manage Inquiries” section, the Coop/Hub Coordinator must view the full details of what the Buyers submitted.]

Ang dashboard dapat meron ding hiwalay na count or visual kung ilan ang avilable to others and not available to others (THINK THE RIGHT TERM FOR THIS IT MUST BE CONSISTENT WORDING/TERM IN THE WHOLE SYSTEM maybe current use and available?!?!) so that the LGU and COOP will know how many biomass are used by the producers and how many available biomass (by category) for other uses si that it can be available for an inquires by the potential buyers.

[The Dashboard, there should be a separate count or visual if how many are “Available to others” and “Unavailable to others”, so that the LGU and COOP will know how many biomass are used by the Producers and how many biomass(by category) for others have used. So it can be available for an inquiry by the Potential Buyers.]

Additionally sa dashboard makita doon sa map lang butuan kung saan na baranggay ang may pinaka maraming napoproduce na biomass in terms of may exisiting use na sya internally sa company/mill/Farm orrr availability (siguro hiwalay din sila na map) then rank list ng barangays na may pinaka maraming naproduce na biomass makikita doon ang ilang tons or kilo naproduce nila each category sa biomass (use slicer nalang siguro) list also ng mga mill or company or farming group na nag poproduce ng biomass (same doon ss bragay ranking)
[Additionally, in the Dashboard, it should also include a map of Butuan where it shows the Barangay that as the most produced biomass in terms of any existing use internally in the company/mill/farms or availability(I guess, this can be a separate map). Then a ranking list of barangays that has the most produced biomass which shows how many tons or kilos proudeced for each category of biomass types(use a slicer?). Also include a list of Mills/Company/Farm groups that has produced biomass(same as the barangay ranking list)]

LGU / Institutional Portal:

Validation Actions: Hindi maclick ang Reject or Return dapat meron mag aapear kung bakit nya irereturn or irereject. And sa pag validate naman kindly read the paper for the basis of being validated ang biomass.
[For Validation Actions, the “Reject” or “Return” are not interactive, there should appear that tells you why you would “Reject” or “Return”. And for the “Validate Record” check the AgriCycle paper for the basis of validating a biomass record]

Then what is “Under Review” Status?

Ang dashboard (LGU AND COOP PORTAL) meron din hiwalay na count or visual kung ilan ang available to others and not available to others so that the LGU and COOP will know how many current biomass are used by the producers and how many available biomass (by category) for other uses so that it can have an inquiries by the potential buyers.
[The Dashboard(For both LGU and Coop Portal), there should be a separate count or visual on how many are available to others and unavailable to others so that the LGU and Coop will know how many current biomass are used by the Producers and how many available biomass(by category) for other uses so that it can have an inquiries by the potential buyers.]

Notification bell must be functional (LGU, COOP, and BUYER PORTAL) kung anong update ang nangyari kung may nag inquire ba, navalidate na, may nagsubmit ng biomass, etc)
[The Notification Bell must be fully functional(LGU, Coop, and Buyer Portals) what kind of update has happened like who inquired, validated, or who submitted a biomass, etc,,.]

Buyer Portal:

Sa pag submit ng inquiry ng buyer, dapat ang merong collection time which is mag set ng date (put calendar) and preferred time to pick up not the label — preferred availability.
[When you submit an inquiry from a buyer, it should have a collection time in which you can set a date(put a calender) and preferred time to pick up, not the label— preferred availability.]

The clickable submission it must be “submit an inquiry” (what is the appropriate term?)
[]

Admin Portal:

Sa system audit trail dapat makita sa part ng user ang name and role.
[In the “System Audit Trail”, it should display the user’s Name and Role.]

Ang sa users na tab is dapat makita na ang mga users sa system it must be appear there lahat and by category sana sya para mas organize like list ng user sa buyer, list sa user sa coop/hub etc.
[For the “Users” Tab, it should display all the users in the system and it should be by category like a list of users for buyers, list of users for coop/hub, and etc,.]

Alisin nalang ang roles and permission and reference data na tab.
[Remove the “Roles and Permission” and “Reference Data” Tab]

Ang analytics is same with lgu and coop ang makikita na dashboard.
[The Analytics should be the same with the LGU and Coop on what is displayed on their Dashboard.]
